with a vast landscape of material careful distillation of the most important discoveries helps researchers find the key information publications in nanoscience cross conventional boundaries from chemistry to specialised areas of physics and nanomedicine this volume provides a critical and comprehensive assessment of the most recent research and opinion from across the globe topics covered include but are not limited to advancing lithium ion battery technology sonochemistry in nanomaterial synthesis mechanoluminescence and electronic and optical features of 2d materials appealing to anyone

practising in nano allied fields or wishing to enter the nano world this useful resource provides a succinct reference on recent developments in this area now and looking to the future

in this provocative book new york times a contrarian physicist argues that her field s modern obsession with beauty has given us wonderful math but bad science whether pondering black holes or predicting discoveries at cern physicists believe the best theories are beautiful natural and elegant and this standard separates popular theories from disposable ones this is why sabine hossenfelder argues we have not seen a major breakthrough in the foundations of physics for more than four decades the belief in beauty has become so dogmatic that it now conflicts with scientific objectivity observation has been unable to confirm mindboggling theories like supersymmetry or grand unification invented by physicists based on aesthetic criteria worse these too good to not be true theories are actually untestable and they have left the field in a cul de sac to escape physicists must rethink their methods only by embracing reality as it is can science discover the truth

che riflettano sull esistenza dei buchi neri o prospettino nuove scoperte al cern i fisici sono convinti che le migliori teorie debbano essere belle naturali ed eleganti sfortunatamente sostiene sabine hossenfelder tali requisiti sono anche il motivo per cui non c è stato alcun progresso significativo in fisica teorica negli ultimi quarant anni guidati da criteri estetici i fisici hanno architettato nuove sbalorditive teorie ma le osservazioni non sono state in grado di dare supporto a queste idee e in realtà molte di esse non sono neanche sperimentalmente accessibili e queste teorie troppo belle per non essere vere hanno condotto l intero campo di ricerche in un vicolo cieco per uscire da questa trappola i fisici devono ripensare il modo in cui costruiscono le loro teorie sedotti dalla matematica ci ricorda che solo accettando il disordine e la complessità gli scienziati possono scoprire la verità sul nostro universo
